The Codes and Standards Committee continues to seek new initiatives, and we are committed to improving the standards of practice for all deep foundations industries. If anyone has issues or questions regarding current building code requirements, please do not hesitate to contact the committee.

The deadline for submission of CCPs for the 2021 code cycle was January 7, 2019. The DFI Codes and Standards Committee, in association with the GeoCoalition, submitted 16 CCPs for this code cycle. The purpose of these CCPs is to improve the code and improve industry practices for the deep foundations industry. Several members of the Codes and Standards Committee will travel to Albuquerque, N.M. in May 2019 to testify at the IBC public hearings in support of our CCPs.

The Codes and Standards Committee will also be reviewing CCPs submitted by others that pertain to the deep foundations industry. If we conclude that a CCP would have an overall negative impact on the deep foundations industry, we will testify against it. In addition, we will bring such code change proposals to the attention of the respective DFI Committees most likely to be impacted.

The Codes and Standards Committee continues to seek new initiatives, and we are committed to improving the standards of practice for all deep foundations industries. If anyone has issues or questions regarding current building code requirements, please do not hesitate to contact the committee.
