

Integrity Testing of Deep Foundation Piles –

PileInspect is a three year research project sponsored by the European Commission under the Seventh Framework Programme (FP7) — Research for the benefit of the SME Associations

THE TOPIC

Many thousands of kilometers of piles are installed yearly in Europe. If a failure is not detected during installation of a pile, the results can be more catastrophic with high costs associated with even a single failure.

Current pile inspection techniques involve dynamic load or sonic integrity testing. These are relatively fast to perform. However, the quality of results depends strongly on the skill of the operator and the results are often open to interpretation. Some studies also indicate that defects representing less than 50% of cross sectional area are not detectable via sonic integrity testing.

A defective pile

PROJECT OBJECTIVES

Pile Inspect aims over 3 years (2013-16) to improve the inspection of the integrity of cast-in-place and pre-cast concrete piles.

- The Pile Inspect research, if successful, will:
- supplement the instrumented hammer and pile driving hammer with a portable shaker which will ensure repeatable, tailored excitation spectra, and should dramatically improve estimation accuracy of diagnostic features;
 - employ innovative signal processing methodologies (based on higher order spectral and impulse response function) in order to increase the quality of diagnosis and perform automatic defect recognition.

PROJECT WORKSHOP

Workshop programme:

- 10am** Welcome and BIC introduction (Dr Cem Selcuk)
- 10.15am** Pile Inspect project introduction (Professor Peter Trampus, project coordinator)
- 10.30am** Current pile integrity testing practice and limitations (Tony Butcher, BRE)
- 12pm-4pm** Research performance to date
BIC presentation (Dr Haitao Zheng)
BAM presentation (Dr Ernst Niederleithinger)
CRANFIELD presentation (Professor Len Gelman)
Demo of Pile Inspect system and optional Tour of BIC and TWI

Coffee and lunch will be provided.

The PileInspect workshop is to be held on 17th November 2016 at BIC - TWI, Granta Park, Cambridge, CB21 6AL, United Kingdom.

Registration: by e-mail to DFI Europe office@dfi-europe.org .

An invoice will be sent by e-mail accordingly.

Fees: € 80 (if your VAT-number is provided) or € 100 (without VAT-number).

Registration information: DFI Europe: +31 341 456 191

For any queries, please contact Brunel Innovation Centre (BIC):

PROJECT CONSORTIUM

The consortium comprises of 10 partners from 6 EU states:

- **HANDT (HUNGARY)** - HUNGARIAN ASSOCIATION FOR NONDESTRUCTIVE TESTING (MAROVISZ);
- **DFI (NETHERLANDS)** - DFI EUROPE VERENIGING;
- **AEND (SPAIN)** - ASOCIACION ESPAÑOLA DE ENSAYOS NO DESTRUCTIVOS;
- **PileTest (POLAND)** - PILETEST SP ZOO;
- **GSP (GERMANY)** - GSP GESELLSCHAFT FÜR SCHWINGUNGSUNTERSUCHUNGEN UND DYNAMISCHE PRUFMETHODEN MBH;
- **BMNED (NETHERLANDS)** - BOUWSERVICE MANAGEMENT NEDERLAND BV;
- **AARSLEFF (UK)** - PER AARSLEFF (UK) LTD;
- **Cranfield (UK)** - CRANFIELD UNIVERSITY;
- **BAM (GERMANY)** - FEDERAL INSTITUTE FOR MATERIALS RESEARCH AND TESTING;
- **Brunel Innovation Centre (BIC) of UBRUN (UK)** - BRUNEL UNIVERSITY
