

ARTICLE SUBMISSION GUIDELINES

DFI's flagship magazine, *Deep Foundations*, seeks and publishes many bylined articles from experts in the industry. Articles should be informative in nature, and should not read like a press release or sales brochure for the company, and should not include trademarked product names after the first mention. Articles should not be academic papers and shouldn't include detailed references. In addition, **articles should be original work (not previously published)**. Submission guidelines for feature articles are as follows:

Length: Between 1,800 to 2,500 words, with up to 10 photos/illustrations. Article acceptance is provisional until reviewed by DFI.

Author Information: Each article should be accompanied by brief author information (approximately 50 words). Bylines are for industry professionals involved in the project or technology. Writers hired to assist with writing the article are not credited as an author.

Format: Email, CD or DVD. Documents should be saved in Microsoft Word and submitted via email to mageditor@dfi.org

Photos: Photography should be submitted as high-resolution digital images saved as TIF or JPG files, 300 dpi at 5" wide minimum (1500 pixels) for use in the body of the article and 300 dpi at 7.5" wide (2250 pixels) for a featured photo such as the opening photo in the article. If submitting a photo to be considered for use on the issue cover, digital images must be at least 8" x 10" at 300 dpi. Large image files can be sent via file transfer programs such as DropBox, We transfer, etc. **Please do not submit photos embedded in Word documents**

Illustrations: Illustrations can be submitted electronically as separate TIFF, JPG or EPS files, preferably created in Photoshop, Adobe Illustrator, CorelDraw or Macromedia Freehand. Files created in Adobe Illustrator, CorelDraw and Macromedia Freehand must be saved as EPS format. **Please do not submit graphics embedded in Word documents.** All graphics must be a minimum of 5" wide at 300 dpi.

All scanned art should be at least 300 dpi and should be scanned at its true size. Solid black-and-white line art (no gray screens) should be scanned at the highest resolution possible—1,200 dpi is ideal—and saved in Bitmap format.

Tables and charts can be created in Microsoft Word or Excel.
