# TABLE OF CONTENTS

1. **INTRODUCTION**

2. **CAPACITY OF A SINGLE PILE**
   2.1 Load-Transfer Mechanism – Shaft Resistance
   2.2 Load-Transfer Mechanism – Toe Resistance
   2.3 Capacity Determined from In-Situ Testing
   2.4 Installation Considerations
   2.5 Soil Set-up and Resistance at EOID and RSTR
   2.6 Residual Compression
   2.7 The Neutral Plane

3. **CAPACITY OF A PILE GROUP**

4. **SUMMARY OF DESIGN PROCEDURE FOR CAPACITY**

5. **SETTLEMENT OF PILE FOUNDATIONS**
   5.1 Introduction
   5.2 Conventional Approach
   5.3 The Janbu Tangent Modulus Approach
   5.4 Calculation of Pile Group Settlement Calculation
   5.5 Summary of Settlement Calculation

6. **STRUCTURAL DESIGN OF PILES**
   6.1 Introduction
   6.2 Allowable Stresses During Driving
   6.3 Allowable Load During Service Conditions

7. **EXAMPLES**
   7.1 Example 1
   7.2 Example 2
   7.3 Example 3
   7.4 Example 4
   7.5 Example 5

8. **REFERENCES AND BIBLIOGRAPHY**
